

## Tritone® Technologies headquarters move to accommodate company's accelerated growth

**Rosh Ha'ayin – 25 April 2022** – Tritone® Technologies, a global provider of metal and ceramic additive manufacturing (AM) technology for industrial production, has announced of its new headquarters location to new office space to accommodate the rapid growth and future expansion plans for its business.

Tritone Technologies is pleased to announce the move of their new headquarters to a more dynamic and modern space location in Rosh-Ha'ayin, Israel.

The new headquarters benefit from improved facilities for its staff as well as accommodating customers and partners to its premises. The new office space provides a better capacity for R&D, marketing, customer support, engineering, and a sophisticated showroom. The new showroom center allows the company to showcase its latest innovative systems to customers and partners.

“We were fortunate to find such a nice and large space located near our previous offices in the central area district of Israel. In the upcoming months we will lease additional space for our lab support and machinery. Our new location will help our company to expedite growth and to give our employees a better working environment and experience. It will also help us stay in line with the current needs of showcasing our machines through online technologies, as things have shifted due to the Covid-19 pandemic where businesses had to become more accommodating to change”, says Ronen Braunstein, COO of Tritone Technologies.
